

Prince Charles Hospital

**Sector:**

Health care

Location:

Brisbane, Queensland

Client:

Multiplex

Building value:

\$140 million

Year:

1999

Description:

Our knowledge and technical expertise in hospitals gave us an edge in bidding for the air conditioning services work at Prince Charles Hospital.

The works included the installation of water plant and circulating equipment, heating, water and reticulation systems, air handling units and air distribution systems, operating theatre systems with HEPA filtration and fume cupboards.

Our success on this project placed us in good stead for other landmark hospital projects in Queensland such as Mater Children's Hospital, Bundaberg Hospital and Queensland Institute of Medical Research.
